

WR2QTP: Interoperate's best-in-class WinRunner to QTP migration solution.

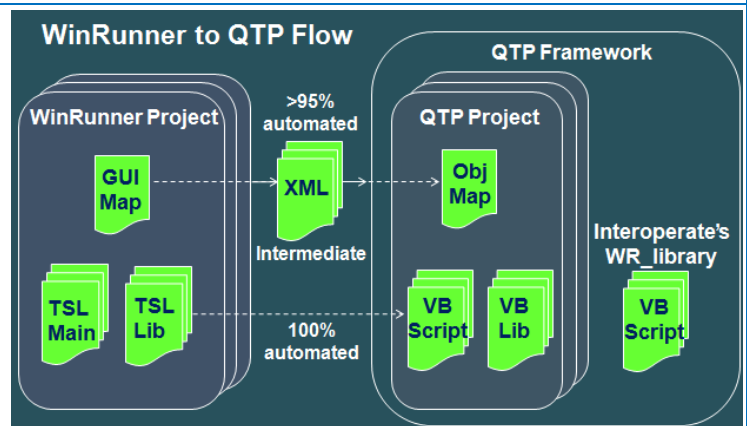

Problem: HP WinRunner announced end-of-life

On February 15, 2008 Hewlett-Packard announced the End-Of-Life of the HP Software (formerly Mercury Interactive) WinRunner functional GUI testing automation tool. Starting August 1, 2009 no patches or bug fixes will be issued by HP. Based on WinRunner customer feedback, existing migration solutions are inadequate because only 80% automation occurs and the remaining manual translation is too labor intensive.

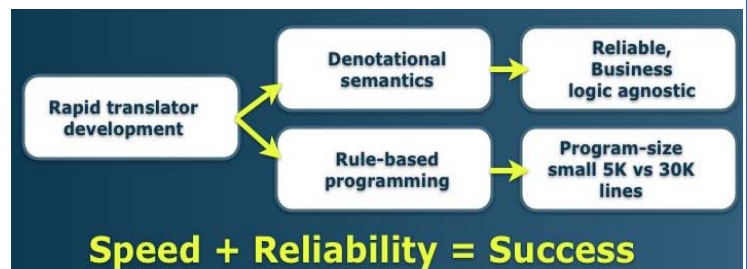

Migrate WR TSL using WR2QTP:

Our WR2QTP solution automatically translates 100% of the TSL scripts (the hard part due to test complexity) and >95% of the GUI Map files (the easy part to edit). This means WR2QTP has significantly lower risk/time and much less cost compared to manual or partial solutions. Our focus on software solutions provides maximum flexibility for WinRunner customers and partners.

Why Interoperate's Solutions?

Our >95% high-level migration solution was built upon extensive research that employs the power of *denotational semantics* and *rule-based languages*. The result is that WR2QTP has the best-in-class automation and reliability.

Working with Interoperate:

Using our automatic WR2QTP tool it is extremely fast and easy to migrate TSL scripts and GUI map files from WinRunner to Quick Test Pro (QTP) VBScripts. We have established a partner network to keep customers' migration *costs to a minimum and on schedule*. Ask your testing group or preferred external testing vendor to contact us to qualify for a free WR to QTP *proof of concept* for up to 25000 lines of WinRunner code.
